

Dear Sirs:

The risk of interference is significantly greater than the BPL proponents say it is; The fox is providing info on how secure the chicken coop is. There is far more evidence of problems now than there was when the FCC opened its Notice of Inquiry last April.

The proposed "interference mitigation" requirements fall far short of providing real protection from harmful interference, and the Commission is ignoring the practical problems that will arise when Amateur Radio transmissions disrupt BPL systems.

Additionally, BPL will wipe out the average person's ability hear SW broadcasts, an intolerable affront to the American principle of being able to hear different, foreign points of view. This is outrageous.
